

RCMA™

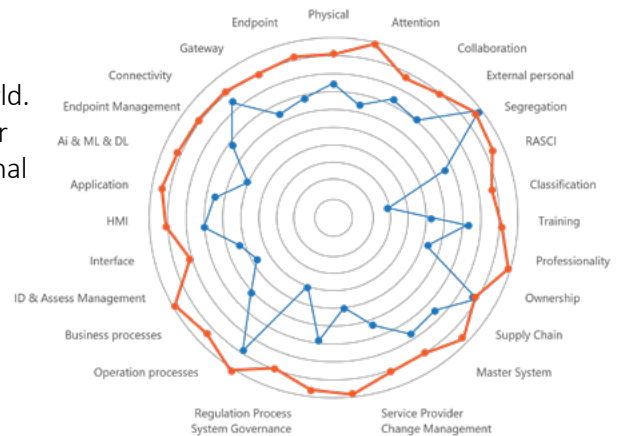

Strategizing Cyber Security

The Challenge

The cyber-risk landscape is ever-evolving and organizations face the need to comprehend their risks and swiftly implement protective measures. The challenge lies in obtaining true, deterministic insight into cyber maturity, readiness, and risk, enabling the identification and closure of gaps while avoiding non-contributory activities. This requires continuous insight into the organization's cyber landscape and dynamically adapting to internal and external changes. Understanding all facets of the company is crucial, along with translating them into active, dynamic, and continually updated business-cyber activities to fortify cyber sturdiness

Our Solution

RCMA™ is a unique methodology based on IEC's field-proven experience as one of the most secured organizations in the world. RCMA™ is a comprehensive multilayer and multi-segment cyber management tool providing decision makers at any organizational level the best path for optimal cyber readiness and maturity. Customized to the specific environment of each organization, RCMA enables the optimization of business risk appetite, operational needs, and cyber investments, empowering organizations to understand their current cyber level and take strategic actions to improve their cyber posture.

Features and Capabilities

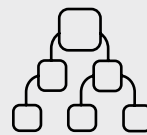

Adaptable

To customer characteristics, environment, culture, regulations

Multi-Segment

Cyber readiness, Cyber Maturity, Cyber Risk QRA and IRM

Multilayer

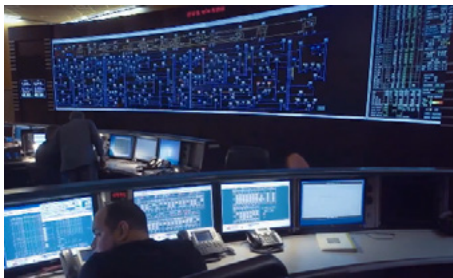

Structured to organizational layers from board to field management

Actionable

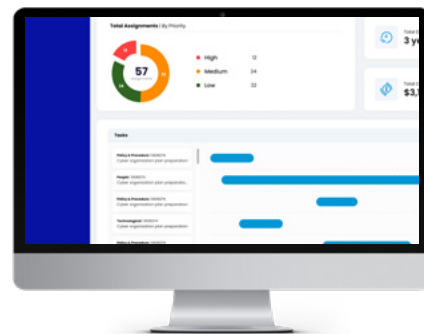

Clear actionable recommendations with measurable KPIs based on industry standards

RCMA™'s Uniqueness

Field-Proven

Developed By IEC's vast cyber and operational experience and in-house engineers

Complete Cyber Journey

From deterministic picture of the current cyber picture and up to a fully adaptive roadmap, providing continuous, real-time adjustments and guidance

Rapid

Carried out in just 7-12 weeks, based on our efficient assessment using a unique methodology to analyze selected data

Continuous

Implementing Cyber Roadmap, monitoring and measuring quarterly progress and KPIs, and identifying any roadblocks. We provide ongoing updates on cyber frameworks and methodologies and present any relevant new findings
